About Critical Care Services Ontario

Established in 2005, Critical Care Services Ontario (CCSO) led the implementation of Ontario's first Critical Care Strategy and now centrally coordinates and develops integrated system solutions for critical care (Adult, Paediatric and Neonatal) and specialty programs aligned with critical care (Neurosurgery, Trauma and Burns, and the Life or Limb Policy). CCSO's work is the result of an ongoing collaboration between critical care providers, hospital administrators, partners from the Ministry of Health, Ontario Health, and other health system leaders.

Foreword

Ontario's Critical Care Surge Capacity Management Framework was first developed in 2009 (Post SARS). The framework provides critical care units and staff the tools needed to have a common approach to managing increases in volume of patients who are critically ill. The scaled response framework helps to ensure integrated communication plans, streamlined use of information technology and predetermined plans for human resources and use of alternate physical space are ahead of a surge situation. In addition, the framework strengthens system capabilities to address surge events within hospitals, across Ontario Health (OH) regions and throughout the province.

In light of continued critical care pressures in Ontario throughout the COVID-19 pandemic, Critical Care Services Ontario (CCSO) has undergone a process to refresh Ontario's Surge Capacity Management Plan with the goal of streamlining information, highlighting hospital accountabilities and providing further clarity on every step of the scalable surge response process. The updates are reflected in documents which includes Minor Surge Toolkit, Moderate Surge Response Guide and Ventilator Guidance Document, refreshed in of April 2023.

On behalf of CCSO, we extend sincere thanks and gratitude to all those who have continued to contribute to our efforts to maintain and improve the planning and coordination of the Critical Care Surge Capacity Management Framework.

Sincerely,

 $\textbf{Bernard Lawless},\, \mathsf{MD},\, \mathsf{MHSc},\, \mathsf{CHE},\, \mathsf{FRCSC}$

Provincial Lead

Critical Care Services Ontario

Cindy VandeVyvere, MBA

C. Vandre//_

Executive Director

Critical Care Services Ontario

Executive Summary

Background

Ontario's battle with Severe Acute Respiratory Syndrome (SARS) revealed several areas for improvement in Ontario's health care system, including a limited ability to manage critical care resources across hospitals in response to a sudden increase in demand.

Following SARS, the Ministry of Health and Long-Term Care (MOHLTC) asked a group of system leaders, including hospital administrators and health care providers to conduct a comprehensive review of Ontario's critical care services. This process culminated in the release of the Ontario Critical Care Steering Committee's Final Report in March 2005. This seminal report sets out a blueprint for the transformation of Ontario's critical care services. Five of the Report's 33 recommendations put forward an approach for improving hospital, Local Health Integration Network (LHIN) and provincial management of surges in demand for critical care services*.

Acting on this report, in January 2006 the Minister of Health and Long-Term Care announced Ontario's Critical Care Strategy, a seven-fold strategy to improve access, quality and system integration. As a further evolution of this strategy, Critical Care Services Ontario (CCSO) provides ongoing support for a provincial Surge Capacity Management Program that provides Ontario hospitals with a standardized practice for managing spikes in patient volumes or demands for critical care services. The program was first implemented in all Ontario critical care units in 2008, after a successful pilot of the program in the Champlain LHIN.

The purpose of this toolkit is to give each hospital access to information on strategies required to implement a surge capacity plan and management framework. This toolkit was developed to facilitate implementation and provide a consistent approach in the application of the surge capacity planning and management strategies. This will standardize the way hospitals across the province manage critical care surge events, and will help to improve communication between hospitals and OH regions.

^{*14} LHINs were reorganized into 6 OH regions in 2021. This document has been updated to reflect the change to OH regions.

1. Understanding Critical Care Surge Capacity Management

Definitions

Surge capacity management incorporates standardized guidelines to manage minor, moderate and major surges. Access to critical care services cannot be ensured if patient volumes exceed the critical care bed capacity. Alternative measures must be coordinated within organizations and OH regions to accommodate for increasing patient volumes.

Although the MOH has made capacity investments by increasing the total number of critical care beds, consistent strategic elements to manage these resources improves the ability of critical care units to handle minor surges as a daily occurrence and provides a scalable framework to manage moderate and major surge events when they occur.

This toolkit establishes definitions and metrics that provide a common vocabulary for addressing surges and demand for critical care services (please refer to the glossary for terms found in this document). Surges are classified as "minor" if they can be managed by a single hospital, "moderate" if they require the collaboration of several hospitals across regions and "major" if the response requires critical care resources from across the OH regions, province or nationally, and may involve EMAT (Emergency Medical Assistance Team).

The different levels of surges are described below:

Minor Surge: An acute increase in demand for critical care services, up to 15% beyond the normal

capacity (>100% and <115%), where response is localized to an individual hospital. A Minor Surge could result in unplanned admissions from the OR, deteriorating patients on the ward, or going into a minor surge state for the purpose of accepting life or limb

threatened patients from a referring hospital.

Moderate Surge: A larger increase in demand (≥115%) and/or when patient safety is compromised

resulting in a situation, where an organized response at the OH regional level is required. Occurs when a hospital in Minor Surge is no longer able to maintain services and needs to rely on the resources of other hospitals to assist with managing the surge. A Moderate Surge could also result from a single event (infectious or casualty) requiring the response of several hospitals in a region to respond to the increase in

demand.

Major Surge: An unusually high increase in demand that overwhelms the health care resources of

individual hospitals and regions for an extended period of time, where an organized

response at the provincial or national level is required.

Key Elements for Surge Management

Critical care surge capacity management requires the consistent application of 5 key surge management principles across all levels of surge:

1. Management:

- -Identify who is accountable for oversight of the surge event.
- -Define the level of response that is required.

2. Human Resources:

- -Establish pre-determined plans for utilization of human resources to meet patient needs during a surge event.
- -Build enhanced skill sets to meet patient needs during surge events.

3. Equipment & Technology:

-Establish pre-determined plans for utilization of equipment and resources to meet the patient needs during surge events.

4. Physical Space:

-Establish pre-determined plans for utilization of alternative physical space to meet the increased demand in patient volumes.

5. Processes to Address Surges:

-Establish processes that will address each level of surge.

A more detailed explanation of these elements and the associated strategies for implementing them can be found in Appendix A. It is worth noting that the use of these elements and response principles will become the common practice for all levels of surge across the province. Application of a consistent approach with common principles enables the health care system to have a well-built infrastructure in responding to surge events. This common practice facilitates each level of surge planning to become a rehearsal for the next; minor surge responses become the rehearsals for larger scale responses that are required for moderate and major surges. This preparation becomes the key success factor in managing surge events.

Implementation of consistent guiding principles will ensure a continuum of coordinated care. This process will further develop and strengthen the critical care system by providing coordinated efforts in surge capacity planning. Common principles and strategies implemented across the critical care network will strengthen communication, improve partnerships and increase access to critical care services for patients.

In utilizing industrial principles of system analysis and flow mapping methodology, this program quickly identifies process improvement needs of each organization and throughout the system. The Critical Care Surge Capacity Management Program will encourage hospital ownership and accountability for surge capacity planning.

Benefits of Critical Care Surge Capacity Management

Establishing a system of preparedness is necessary to ensure optimal care during dynamic surges, and it benefits the hospital system. Critical care surge capacity planning becomes a part of each hospital's overall emergency response planning but with an emphasis on meeting the needs of critically ill patients.

- 1. Patients will gain access to safe and timely critical care services when they need it.
- 2. Critical care units will have designated plans to handle minor, moderate and major surges.
- 3. <u>Hospitals</u> will have established plans to manage minor, moderate and major surge events. Having preestablished plans will identify gaps and areas for improvement in existing processes. Establishment of a prepared system will also ensure appropriate and efficient use of resources in the event of a surge.
- 4. OH regions will have established organized, systematic surge capacity plans that will enable coordinated efforts across boundaries to ensure timely access to care.
- 5. <u>CCSO and MOH</u> will be prepared and respond to the growing need for critical care services in the province.

2. Building a Surge Management Framework: A Stepby-Step Guide

Objective 1: Establish Corporate Sponsor and Steering Committee

Surge capacity planning requires organizations to adopt surge capacity management in their infrastructure. This initiative requires corporate support and commitment to be successful. A senior leader will play a pivotal role in facilitating change management. Corporate commitment will communicate the need for change, establish priorities and give direction to the process. Embedding this commitment in the organizational culture will give the necessary drive to change at the frontlines and provide the required ownership to make surge capacity planning a priority for the organization. A champion has the ability to define expectations of all medical and frontline staff for compliance with the initiative. Corporate commitment is essential for accountability in the organization and this accountability will ensure standardization in the application of surge capacity management principles across the province.

Complete the following activities to identify your Corporate Sponsor:

- Identify a Corporate Sponsor as the designated champion for surge
- Ensure the Corporate Sponsor is informed on the Critical Care Strategy and Surge Capacity Management principles to ensure consistency in communication
- Corporate Sponsor will co-chair the Corporate Steering Committee.

A key factor in closing the gap between best practice and common practice is the ability of health care providers and their organizations to rapidly spread innovations and new ideas¹. Creation of organizational champions will enhance communication to varied departments and frontline staff. Champions ensure a collaborative approach is taken as project partners build organizations that have the ability to manage surges. This process will give an aerial view of what organizations require to integrate services and create a system that delivers access to services when patient volumes exceed normal capacity.

Critical care patients are complex and require a system-wide management model to ensure improved outcomes or survival. To be effective, implementing system-wide change requires coordinated and collaborative efforts from multi-disciplinary teams. Therefore, surge capacity management champions from

¹ Massoud MR, Nielsen GA, Nolan K, Schall MW, Sevin C. **A Framework for Spread: From Local Improvements to System-Wide Change.** IHI Innovation Series white paper. Cambridge, MA: Institute for Health care Improvement; 2006. (Available on www.IHI.org)

across the organizational infrastructure are required to communicate with the frontline staff to ensure seamless coordination of services for critically ill patients. This can be achieved by participation on a Corporate Steering Committee. If a similar committee already exists in your organization, consider this committee as the forum for communicating the project objectives to other departments.

Complete the following activities to enhance communication among all areas and departments:

- Identify a champion from all of the following departments to participate on the Corporate Steering Committee
 - Medicine (Chief of Staff or Representative from Internal Medicine)
 - Nursing Administration
 - o Peri-operative Services
 - Emergency Department
 - o Infection Control
 - Material Management
 - Organized Labour Representatives
 - Frontline Staff Champions Critical Care

0

 Members to provide an in-service training to their respective areas on the surge capacity management principles

Objective 2: Establish a Critical Care Surge Resource Team to Implement Surge Capacity Strategies and Coordinate Future Surge Events

The Surge Capacity Management Framework and required processes have been developed by Critical Care Services Ontario. Each organization will develop a central group that will be responsible for implementing the plan to establish preparedness within their own organization. The teams will be referred to as the Critical Care Surge Resource Teams. Teams may vary in size and composition depending on the availability of staff and the composition of the critical care units. Each organization will build a team to suit its own needs. A suggested framework for the teams is listed below.

The Critical Care Surge Resource Team will aim to establish preparedness in the organization by addressing all five of the principles of surge capacity management. The success of this project will depend on including the right people on the team who will champion the cause not only in the critical care environment, but throughout the organization. Teams will partner with their Corporate Sponsor to ensure accountability is maintained.

The overarching goal of this program is to ensure access to service in a timely manner for patients who require critical care. Each hospital is encouraged to be innovative with their communication plans and techniques. However, to ensure sustainability for the provincial program, a consistent application of each principle is needed.

Complete the following activities to begin implementation of the surge capacity management strategies:

- Identify a physician who will be the Physician Gatekeeper for critical care capacity
- The Physician Gatekeeper will co-chair the Corporate Steering Committee with the Corporate Sponsor
- The Physician Gatekeeper is accountable for managing critical care capacity for surge events
- Assemble a Critical Care Surge Resource Team. The suggested framework for the team includes the following members:
 - Physician Champion/Gatekeeper/Medical Lead
 - Nurse Manager
 - Nurse Educator
 - Four Frontline Staff (mix to include 2 senior RN, 1 junior RN, and 1 RRT)

Complete the following activities to implement surge capacity strategies:

- When the team is formed, identify roles and responsibilities and who will perform each task on the assigned Transformation Map
- Designate one member as the Site Lead
- Schedule a regular meeting time for your Critical Care Surge Resource Team
- Prepare a checklist for designate of critical care unit to facilitate in a time of surge. Refer to Appendix K for sample checklist and Appendix I for a sample of the Minor Surge Event Worksheet

Objective 3: Complete Comprehensive Hospital Assessments

Surge capacity is the ability to expand care in response to rapid or a more prolonged demand for health care services. Prior to beginning any action plan or process improvement map, it is critical to assess and document the current-state of the hospital. A key component to surge capacity management and forecasting is a quality indicator program. Quality indicators provide information that allows process improvement and evaluation. This data enables your organization to identify, review, analyze and feedback on areas for improvement.

The data collection framework involves the following assessments:

A. Hospital, Capacity, and Service Assessment

This initial assessment will give a clear and defined overview of the capacity and capability of your critical care unit and the organization. This initial building block will establish the framework for surge capacity plans in your organization. The purpose of the assessment is to identify existing plans and services in the organization and build on this infrastructure to ensure consistency and standardization of surge planning within organizations, across OH regions and throughout the province.

B. Flow Mapping Process

The next critical step for surge capacity management is to determine the flow of patients from the point of admission, to the clinical area, and finally to discharge. Flowcharts allow you to visualize how a process functions so that it can be understood and so that complex processes can be clarified. The goal of flow mapping in surge capacity planning is to identify system processes and improve system efficiencies.

C. Patient Flow Monitoring

The final piece of the hospital baseline assessment is patient flow monitoring. Patient flow monitoring will enable you to gain a snapshot view of the patient flow activities in your critical care unit(s). The goal is to improve efficiency while maintaining patient safety. This surveillance method will enable identification of staffing patterns and provide an opportunity to review admissions and discharges processes to better understand capacity in preparation for surges. Pairing this information with Critical Care Information System (CCIS) data will provide an opportunity to facilitate analysis of the processes and identify barriers to planning for and matching resource requirements.

D. Updating the Critical Care Information System

Throughout this implementation plan it is important that the Critical Care Information System (CCIS) is kept updated. Every effort must be made to ensure accountabilities to data entry are followed and that CCIS is kept current daily.

Complete the following activities to assess the current hospital state:

- The Critical Care Surge Resource Team to complete the Hospital, Capacity, and Service assessment worksheets (Forms A, B, and C; See also Appendix B)
- The Critical Care Surge Resource Team to complete a flow mapping exercise (a guide and sample worksheets can be found in Appendix C)
 - o Encourage input from all members of the Critical Care team
- Complete the patient flow monitor record on a daily basis, for a period of three months (Form D found in Appendix D)
- When the comprehensive hospital assessments are completed, it is very important to identify any barriers or implications that would affect change management

Objective 4: Establish a system that is Knowledgeable about Surge Capacity Management

System change relies on communication within all levels of the organization. Care of the critically ill patient population requires coordination of services across the spectrum of care. In adopting the concept of seamless coordination of services for critically ill patients, each organization will establish a communication plan that will convey the understanding of the surge principles. The communication plan is the first step in management of surge events. With the proper tools, frontline staff will be prepared to coordinate care for critically ill patients at all levels of surge. The communication plan must involve all members of the organization ranging from frontline staff to medical staff.

The communication campaign that is recommended with this project is divided into two phases. Phase 1 will focus on education of frontline staff, administrator and medical staff of the surge capacity management framework. Phase 2 will focus on implementation of techniques and process that will strengthen communication during crisis or surge events.

Complete the following activities to establish a system that is knowledgeable about surge capacity management:

- Create a communications campaign that educates all frontline staff, administrative, and medical staff on:
 - The surge capacity management plan
 - Implementation strategies
 - The benefit to patients, families, staff, organizations and OH regions
- Consider using existing publications, newsletters, emails, lunch-and-learn and existing meetings at your individual communication departments
- Conduct information sessions for the following groups:
 - Medical Advisory Committee (MAC)
 - o Senior Team
 - o Frontline Staff
 - Other departments i.e. Surgical Services and Emergency Room

Objective 5: Establish a Critical Care Communication and Triage System

The critical care unit is a complex and dynamic environment that can be challenging, as patients require extensive monitoring and lifesaving interventions. A strong communication process and plan can minimize uncertainty while delegating daily tasks and during surge events. Effective communication and teamwork are essential for delivering high quality patient care and maintaining patient safety.

Communication failures are a common cause of errors resulting in inadvertent patient harm. The complexity of medical care make it very important that clinicians have standardized communication tools, create an environment in which individuals can speak up and express concerns, and share common "critical language" to alert team members to unsafe situations.² Establishing a standardized communications system in a critical care environment will provide a consistent mechanism of reporting between team members.

It is essential to establish a mechanism that quickly communicates the status of the critical care unit as a whole. To ensure a consistent approach to this communication method, it is necessary to triage patients daily on the basis of their acuity to provide a standardized practice in critical care units. This triage process will be communicated via the communication board (commonly known as the white board) that will be in a central location in the critical care unit. It will identify, which patients must remain in the unit (Red), patients that should be reassessed and potentially be transferred out of the unit (Yellow) and patients that could be transferred out of the unit (Green). The following is the triage methodology/traffic light system that will be used for this program:

RED Patient remains in ICU as they require life-sustaining interventions

AMBER/YELLOW Possibility of transfer within 36 hours

GREEN Patient is ready to be transferred from the ICU

Complete the following activities to establish a critical care communication system:

- Utilize a white board and communication protocols to:
 - Triage patients daily utilizing a colour code to identify acuity
 - Identify the date the patient was placed for discharge to the ward
- Implement a communication tool (e.g. SBAR model) to be utilized on admission and discharge in normal capacity and in crisis and surge events. See Appendix J for SBAR: A Situation Briefing Model
- Identify communication plans to notify all levels of the organization during surge events (such as management/senior team, medical staff, frontline staff, patients and families, general public, etc.)
- Develop algorithms for critical care staff, prepare a checklist to utilize in minor surge events

²M Leonard, S Graham, D Bonacum <u>The human factor: the critical importance of effective</u> teamwork and communication in providing safe care, Qual Saf Health Care 2004; 13(Suppl 1):i85–i90.

Objective 6: Identify Essential Services and Functions Required to Sustain the Critical Care Service

Critical care medicine is a specialty that provides comprehensive and continuous care for adult and paediatric patients who are critically ill and who can benefit from treatment. This essential service can sustain and maintain life at critical moments of illness. The objective of surge capacity management is to establish preparedness prior to a surge event; ensuring health care providers have a controlled environment to provide care. This process will ensure patient safety is maintained.

To understand what resources are required, it is essential to identify which patient populations are served by each critical care unit in the organization. This information will provide the necessary information in planning for resource allocation to care for these patients, especially during minor, moderate and major surge events.

Note: Review flow mapping process outcomes (from objective 3) before beginning these steps. See Appendix C.

Complete the following activities to identify essential services and functions required to sustain the critical care service:

- Establish admission process for critical care patients:
 - Review flow mapping process
 - Identify how patients gain access to critical care
 - o Develop an algorithm for the critical care staff on the admission process
- Identify the discharge process for critical care patients:
 - o Identify who decides if patients are ready for transfer
 - Document the transfer process, inclusive of inter-unit transfer and discharge from the organization (and update CCIS)
 - o For trending, follow the data collection to identify delays in discharge
 - Differentiate the transfer process for minor surge events
 - Coordinate early discharge planning for expediting the discharge of patients during minor surge events.
 - Note: partner with Community Care Access Centres and Social Work to facilitate the process
- Develop criteria for shifting patients to alternative space to accommodate for surge events

Objective 7: Establish System Preparedness for Human Resource Capacity

Human resource compliments is the vital element to successful surge capacity management. It requires preexisting plans for human resources to manage in a time of crisis. Identification of staff skill sets in both critical care and acute care will allow organizations to maximize and build on existing skill sets to secure staff resource for surge events.

In addition, documentation of existing skill sets will ensure organizations, staff, and patients are protected. This process will reduce the risk of a precarious response to surge events. Information on staff skill sets becomes vital information, especially when the surge event requires reallocation of staff to alternative space to manage patients. This information should be readily available to Nurse Managers.

Complete the following activities to review and maximize human resource capability and capacity:

- Identify who is accountable for staffing during a minor surge
- Define 'normal staffing capacity'
- Estimate and document minimum numbers and categories of personnel needed to care for a single
 patient or a small group of patients on a given day for each specific department
- Complete Staffing Inventory
- Document each staff member's skill set in ICU, CCU, PACU, and ER
- Define the necessary critical care skill set
- Identify an enhanced skill set that can be utilized during minor surge events
- Collaborate with local collective bargaining unit in defining the terms of the enhanced skill set
- Identify key strategies in implementing the educational process to establish an enhanced skill set
- Establish an alternative staffing model to increase staff complement during minor surge
- Introduce cross-training of personnel to provide for essential patient care areas at times of severe staffing shortages (e.g. ER, ICU or medical units)
- Define the role of multidisciplinary team members during a minor surge event
- See Appendix E

 Planning for Human Resources

Objective 8: Establish System Preparedness for Alternative Physical Space for Surge Events

When critical care reaches capacity limits, alternative physical areas must be considered depending on the level of surge response that is required. Organizations should have pre-determined and documented alternative space where patients can over-flow to if necessary during a surge event. The alternative space can be utilized for a temporary or prolonged period as deemed necessary. The critical step in establishing alternative spaces for surge events is to pre-determine the functionality of these areas. Early identification of how this process will work, who will work in the area, where will the supplies come from and who will be the resource person for this area are key elements to this becoming a successful tool. It is recommended that the organization prepare portable supply carts, containing all the necessities to provide patient care, which can be mobilized quickly to alternative areas.

Complete the following activities to establish preparedness for alternative physical space for surge events:

- Include key stakeholders in the planning of alternate space areas including infection control, plant operations/facilities planning, etc.
- Identify areas for alternative physical space to be utilized during minor surge events
- If pre-determined areas exist, assess the current functionality of the designated area, particularly as it relates to patient care, work area/storage, equipment, supplies and utilities
- Identify the shared governance between critical care unit and this alternative space
- Establish where the equipment resource will come from
- Prepare an algorithm of the transfer process of patients to this area
- Implement an education plan for frontline staff on alternative physical space
- See Appendix F for an example on managing equipment and facilities for alternative space
- Prepare a checklist to ensure functionality of the alternative space during a time of surge and refer to Appendix K for a sample checklist

Objective 9: Establish System Preparedness for Equipment and Resources for Surge Events

Critical care medicine is concerned with the provision of life support or organ support to patients who are critically ill and who usually require intensive monitoring. Equipment and supplies are essential pieces of the puzzle in providing care for critically ill patients. Equipment and technology can ensure that patient care is delivered in a safe environment and quality of care is maintained.

Common equipment that can be found in an intensive care unit may include the following: ventilators, monitoring equipment, intravenous lines for drug infusions, nasogastric tubes, suction pumps, drains and catheters and a wide array of drugs including inotropes, sedatives, broad-spectrum antibiotics and analgesics. In some critical care units, hemofiltration equipment for acute renal failure is used to sustain organ function.

For a surge event to be managed successfully, it is vital the organization pre-establish inventories of equipment and supplies. This inventory will provide health care providers with an understanding of the capability of the hospital to provide safe care to patient populations and recognize the capability of the organization.

This pre-established inventory will also provide information on what resources are available at the time of the surge event. It is recommended that organizations prepare equipment carts that can be mobilized quickly to alternative areas which contain all the necessities to providing patient care.

What if additional ventilators are required?

As the number of patients requiring critical care services increases, hospitals may find that they have the capability to care for additional patients but lack sufficient ventilator capacity to accommodate them. To mitigate this, a provincial stockpile of ventilators was purchased by the Ministry of Health and Long-Term Care; and a process is in place, whereby hospitals can borrow additional ventilators from the Provincial Ventilator Stockpile.

If a hospital is approaching their maximum ventilator capacity, and has considered all site and corporation-level resources, the hospital VP will notify CritiCall Ontario by calling 1-800-668-4357 (different from number to declare moderate surge), and formally request access to the Provincial Stockpile. Please refer to the 'Ontario Ventilator Stockpile Guidance' document for details.

Complete the following activities to establish preparedness of equipment and resources during surge events:

- Establish an inventoried cache of equipment
- Set-up a portable supply cart that can moved to the surge area
- Identify how equipment is monitored for functionality
- Identify the location and accessibility of equipment for surge events (see Appendix F for example on managing equipment for alternative space)
- Prepare an organization resource checklist to be utilized to access equipment during minor surge events (see Appendix K for sample checklist)
- Collaborate with the OH region to understand what regional equipment resources exist in other centers and how they can be accessed in surge events, including access to the Provincial Ventilator Stockpile
- Ensure preventative maintenance of the stockpile, rotation of the provincial stockpile and submission of the Quarterly Ventilator Tracking form to CCSO (if you are a host hospital).

Objective 10: Establish System Preparedness by Defining a Decantation Process for Surge Events

A common debate among hospital administrators is whether surgical cases should be cancelled to manage surges into the system. However, ensuring flexibility in the system, by pre-determining surgical volumes and making accommodations for a sudden increase in patients, prevents this situation from occurring.

During surge events, some patients will potentially be discharged to their homes or alternative organizations to accommodate for the increase in demand. Activities such as routine surgery and procedures will be reduced or eliminated to free staff and beds. Priorities and pathways need to be determined for each organization. It is recommended that each organization establish a decantation process to be used for surge events.

The specific recommendations to develop a decantation process and for building community partnerships that allow for coordination of services for patients who meet early discharge criteria can be found in Appendix G.

Complete the following activities to establish system preparedness, particularly for decantation processes:

- Establish a system in which planned expected date of discharge (EDD) is documented on all
 patients charts
- Establish the daily distribution of patient lists to all Clinical Managers indicating who may be discharged that day (based on EDD)
- Establish a discharge process to be utilized during minor surge events in critical care and acute care areas
- Prepare an organizational checklist for recommendations for building a decantation process during a minor surge (see Appendix G for Recommendations for Building a Decantation Process)
- Identify how transport services will be utilized during the decantation process

Objective 11: Build Partnerships to Determine How Patient Volumes from Other Clinical Areas Impact Critical Care

Partner with Surgical Services

The healthcare system has a responsibility to ensure healthcare services to the populations we serve. In recognition of the pressure on organizations to strive to achieve wait time targets for surgical cases, the impact of surgical cases on critical care delivery can be great. From the other perspective, it is vital to know how the lack of critical care capacity affects surgical services. Therefore, it is important to partner with surgical departments to identify potential barriers in accessing critical care services.

Complete the following activities to determine the required capacity of surgical services:

- Designate a champion from the operating room (OR) team to the Corporate Steering Committee (OR Manager/Director suggested)
- Partner with operating room services to determine required surgical access to critical care beds based-on service and surgical procedure
 - o Identify and document routine method of booking critical care beds
 - o Review surgical cases requiring critical care service post-operation
 - o Develop a standardized booking process that will enable planning for critical care capacity
 - Establish necessary timelines for booking of critical care beds
- Determine a daily capacity for post-operative cases requiring critical care beds consider staffing, holidays, and resource availability (e.g. 3 OR cases maximum daily)
- Determine a process in which elective surgical cases are cancelled during minor surge events
- Determine who cancels surgical cases during a minor surge event
- Establish a collaborative process between critical care and operating theatre to evaluate the required daily critical care capacity

Partner with Emergency Department

The Emergency Department (ED) is often the initial point of entry for the critical care patient. A process for stabilizing and quickly transferring patients to critical care units should be delineated. This process will ensure the ED is decanted and available for other patients who require access. In addition, this process will ensure that critical care patients have the appropriate level of care. During a surge event, it is critical to know the source of the influx of patients to ensure the appropriate response is activated for the organization.

Complete the following activities to determine the required critical care capacity of the emergency department:

- Designate a champion of the ER team to the Corporate Steering Committee (ER Manager/Director suggested)
- Partner with the ER delegate to identify barriers in accessing critical care services

Objective 12: Evaluation

Upon completion of the Surge Capacity Management Plan, each organization will conduct rehearsals to test the efficiency of their plan:

- o Have a yearly update to review and renew the policy procedures
- Evaluate the success, challenges, and potential risks
- Identify areas for improvement
- o Identify next steps, and lessons learned

Appendices

Appendix A: Surge Capacity Management Elements

The Critical Care Surge Capacity Management Plan will adapt and refer to the definitions in the following tables:

Element	Minor Surge	Moderate Surge	Major Surge
Definition	An acute increase in demand for critical care services – up to 15% beyond the normal capacity, (>100% and <115%), which is localized to an individual hospital.	 A larger increase in demand for critical services that impacts on a region beyond the normal capacity (≥115%). A larger increase in demand (≥115%) and/or when patient safety is compromised resulting in a situation, where an organized response at the OH regional level is required. Occurs when a hospital in Minor Surge is no longer able to maintain services and needs to rely on the resources of other hospitals to assist with managing the surge. A Moderate Surge could also result from a single event (infectious or casualty) requiring the response of several hospitals in a region to respond to the increase in demand. 	An unusually high increase in demand that overwhelms the health care resources of individual hospital and regions for an extended period of time.

Element	Minor Surge	Minor Surge Moderate Surge			
Management Level of Response & Oversight	 A local response at the individual hospital level is sufficient. Individual hospital boards are accountable for overseeing the surge response. 	 An organized response at the regional level is required. Critical Care Clinical leads are accountable for overseeing the surge response. 	 An organized response at the provincial or national level is required. The Chief Medical Officer of Health has powers in emergency situations but the Deputy Minister of Health is ultimately in charge. 		
Human Resources	 Human resources working in the hospital's critical care services should be sufficient to meet the surge. In some instances, more assistance may be provided. All local staff who have volunteered and have been trained in the EMAT will provide an excellent "pool" of human resources for the local hospital. 	 Human resources working in critical care services within the OH Region or network's hospitals may be sufficient to meet demand. These staff will need to be mobile throughout the region. More assistance may be provided by other hospital staff members who have received additional acute and critical care training. All local staff who have volunteered and been trained in the EMAT will provide an excellent "pool" of human resources for the local hospital. 	 Human resources that work in critical care services are not sufficient to meet demand. More assistance will be provided by hospital staff across the provinces who have received additional acute and critical care training. All staff across the province who have volunteered and been trained in the EMAT will provide an excellent "pool" of human resources. 		
Equipment and Technology	 Supplies in critical and acute care services will be sufficient to meet demand. The provincial ventilator stockpile may be utilized. 	Supplies in critical and acute care services may not be sufficient to meet demand. Specialized equipment and medications should be stockpiled to meet moderate surges. These caches should be centrally stored in the OH Region and have a structured process for access and maintenance.	Supplies in critical and acute care services will not be sufficient to meet demand. Specialized equipment and medications should be stockpiled to meet major surges. These caches should be centrally stored in the province and have a structured process for access and maintenance. The existing capabilities of EMAT will provide much of this cache, complemented by the EMU.		

Element	Minor Surge		Moderate Surge		Major Surge
		•	Technologies will be used to disseminate knowledge and skills as broadly as possible (e.g., digital radiography, tele/video consultation, eICU).	•	Technologies will be used to disseminate knowledge and skills as broadly as possible (e.g., digital radiography, tele/video consultation, eICU).
		•	The provincial ventilator stockpile may be utilized.	•	Emergency Medical Assistance Teams (EMAT) has its own medical equipment and supplies.
Physical Plant					
	Physical plant resources in the hospital will be sufficient to meet demand however, the use of alternate space within the facility should be considered (e.g., PACU, emergency departments, and intermediate units). It is necessary for hospitals to evaluate, prepare and equip this space prior to a surge event.		Physical plant resources in an OH Region will be sufficient to meet demand however, the use of alternate space should be considered (PACU, emergency departments, intermediate units). It is necessary for OH Regions n to evaluate, prepare and equip this space prior to surge events. A high degree of communication and collaboration between hospitals and transport medicine systems are necessary for the OH regions to leverage the region's resources during surge events.		Physical plant resources in an OH Region are not sufficient to meet demand. Additional physical plant resources are needed through EMAT. A high degree of communication and collaboration between hospitals and medical transport systems are necessary for the province to leverage its provincial resources.

Element	Minor Surge	Minor Surge Moderate Surge				
Processes to Address Surge	 Process checklists will be used to help address minor surges: Alternate physical spaces, such as PACU, ED, acute care floor beds/stepdown units have been accessed; Critical care admit and discharge criteria have been implemented; The potential to delay electives has been evaluated thoroughly taking into account the risks and benefits to overall patient care; Delays transferring to wards have been addressed; Alternate level of care patients have been transferred to long-term care or other appropriate facility; Transport systems have been appropriately engaged to support the above (where appropriate); Use of alternate staff have been considered; and Cache of appropriate equipment to support surge is available. 	Process to address moderate surge as described in the moderate surge algorithm will be followed: • The index hospital initiates a moderate surge by notifying CritiCall. Index hospital is required to complete a SBAR Form prior to the preamble call. • CritiCall arranges a preamble call with CCSO Clinical Lead, CC Clinical Leads, Index Hospital VP and medical & nursing director to review the situation and to generate mitigation strategies. At this point a decision is made whether a Moderate Surge is needed. • If a Moderate Surge response is activated, CritiCall will facilitate a OH Region-wide teleconference to review the Moderate Surge event and needs of the Index Hospital, confirm available resources from other regional hospitals and establish an action plan to manage to transfer patients as required. • A Follow – up teleconference may be scheduled to provide update on the situation	■ The MOHLTC Emergency Management Unit alerts the CEO of Ontario Air Ambulance (ORNGE) about a request for help. The Ministry ensures all deployment criteria have been met and then directs the CEO to dispatch EMAT. ■ EMAT will assess, treat and triage cases. In the first 72 hours, EMAT will manage patients and transfer those most critical to a lead OH Region hospital. ■ EMAT may continue to manage patients in the field as necessary, but will begin to transfer patients.			

Appendix B: Surge Capacity Management Elements

Section I: Hospital Assessment Worksheet (Form A)

1	Who is the Critical Care Medical Director?	
	Name:	
	Contact Number:	
	Email Address:	
2	Who is the Critical Care Nursing Director or Nurse Manager?	
ŀ	Name:

	# additional staff required* to activate these beds in 1.C.*						
8. Registered Respiratory Therapists	Number of staff required for these beds in 1.A.*						
	# additional staff required* to activate these beds in 1.C.*						
9. Allied Health	Number of staff required for these beds in 1.A.*						
	# additional staff required* to activate these beds in 1.C.*						
10. Administrative support	Number of staff required for these beds in 1.A.*						
	# additional staff required* to activate these beds in 1.C.*						
11. Other	Number of staff required for these beds in 1.A.*						
	# additional staff required* to activate these beds in 1.C.*						

Section III: Clinical and Support Services Inventory (Form C)

This worksheet documents urgent and emergent medical and support/diagnostic services available at each hospital site, the hours of operation for these services, and the current/preferred referral pattern for each hospital.

1. Indicate whether or not your hospital site provides the service and the hours of operation, in particular if the service is available to assist with urgent and emergent consultations

*Hours of Operation Options include:

- a) 24/7 = 24 hours x 7 days/wk
- b) Business Hours = (e.g. 0800 to 1600), Monday to Friday
- c) After Hours = (e.g. 0800 to 2000), 7 days/wk
- d) N/A = Not applicable, this hospital site does not offer the service. If you choose this option please make sure to indicate which hospital you refer patients (in the next column).
- 2. Indicate the other hospitals where you normally refer patients from your hospital for the service. Use this option if the service is not offered at your site or in circumstances when the service is unavailable.

Clinical Services	Hours of Operation*	Preferred Referral Option	2nd Referral Option
Anaesthesia			
Burns			
Cardiac Surgery			
Cardiac Surgery: Angioplasty			
Cardiac Surgery: Temporary Pacemakers			
Cardiac Surgery: Permanent Pacemakers

Gluing (GI)			
Banding (GI)			

Appendix C: Surge Capacity Management Elements

Section I: Flow Mapping Process

I. Why use the flow mapping process?

Flow, value stream, or process mapping is a useful tool to give a graphic view of how care is provided from the patient perspective or how other work processes flow into and out of your unit/organization. The goal of the exercise is to improve efficiency and quality by reducing or eliminating errors, defects, unnecessary or non-value adding steps, delays, constraints and bottlenecks, duplications and rework.

A flow mapping process can:

- Increase productivity
- Improve patient care
- System Integration
- Streamline flow
- Identify opportunities for assistive technologies
- Identify personnel who are responsible for operations
- Confirm cross-functional or cross-departmental links or associations
- Validate the current process and identify areas that would benefit most from change

Specifically, **flow** refers to the progressive movement of products, information and people through a sequence of processes (NHS – Scotland)

"Without a clear understanding of the processes of care there is a risk of changing parts of a process which will not improve the service from the patients perspective and will actually lead to more waits and delays for patients" – NHS Scotland.

II. How do we prepare?

Define the process you want to improve

This step is most likely already complete, however questions you may consider are:

- Is there anything that is currently time consuming?
- Does your organization have existing processes?
- Do your existing processes have notable errors?
- What has a strong potential for improvement?
- What will help build morale?
- Will fixing this process pave the way for mapping other processes?
- What are the limits of the process map i.e. the start and end points or the scope?
- What you are trying to achieve?

Assemble the team

In order to consider all viewpoints of the flow or process, all staff levels who are involved in operations should be included. The team should be given support and authority from Senior Management to also make changes in a timely fashion. Using existing teams that are working on other improvement projects may work, again as long as the membership includes people with a strong knowledge base on the process that is being mapped. Process mapping can be the first step in the improvement process and can inform the measures required for the improvement project as a whole.

Book Time, Venue and Equipment

The mapping exercise should take one day to complete. Share the responsibilities of the activity across the team, as it will take some time to transcribe some of the information in between steps.

Book a room that will accommodate the team as well as enough room to move around and see the walls. "Post-it" notes, pens, flipchart paper and tape are useful as well as a laser projector and computer to display important pieces of information.

III. Mapping the Current Workflow:

Day 1 - Create the Map

- Step 1: Decide on team roles recorders, facilitators etc.
- Step 2: Show examples of what flow maps looks like and decide whether you will need to do a detailed or a high-level map or both
- Step 3: Decide what the first step and the last step in the process is (your terminals) and get consensus
- Step 4: Identify the next steps in between the terminals in order using post-its
 - Do tasks/activities/operations first, then go back and add in time spent, distance traveled, decision-making branches, documentation, databases, etc.
 - Use the basic shapes directory to guide your thoughts about what needs to be included.
 - Some steps happen at the same time and some in parallel.
- Step 5: Review the flow map process with team members to ensure there are no missing steps

Step 6: Assign someone to transcribe and draw the flow "picture" into a flowchart using a program that supports flow diagrams and shapes/symbols consider Excel, Visio, Smart Draw, UML, Edraw Flowchart Software, OpenOffice.org Draw).

- Note: For a how-to guide in excel go here: www.breezetree.com/articles/how-to-flow-chart-in-excel.htm
- Refer to attached chart for commonly used symbols and their meaning.
- Use clouds for unfamiliar steps.
- Do the branches last.

Day 2 - Validate and Analyze the Map

Step 1: Walk the team through the process again to check that all events are included.

- The process map must always depict the total number of steps taken as well as the number of people involved, the total time taken to perform the process step, and all documents used (NHS-Scotland).
- It may benefit the team to have the flowchart enlarged at a print shop in panels so that it can be posted on the wall.

Step 2: Identify the problem areas. Ask each other and yourself the following questions:

- Where are there significant delays/waits? Where are they built into the process? Which are the longest?
- Where are the bottlenecks?
- Which steps do not add value?
- What activities/documents etc. are being reworked or done more than once?
- Is there any unnecessary storage?
- Are there any unnecessary inspection steps?
- What is approximate time between each step?
- What is the approximate time between the first and last step?
- How many steps are there?
- Is work being batched?'
- Is there an inappropriate amount of staff working on an activity? Too many? Too little?

Step 3 (Concurrent with Step 2): Flag activities with different coloured "stickies" that a) do not add direct value or are unnecessary, b) cause waits or delays, c) are reworks, d) are timely, e) staffing issues.

Step 4: Summarize the improvement areas from your process mapping and simplify them into manageable tasks (see references below).

Step 5: Brainstorm about solutions in groups.

- There are no "bad" ideas in brainstorming i.e. there is no evaluation component in this step.
- If the team is large enough and there are many areas for improvement, break out into smaller groups for brainstorming session.

Step 6: Groups will be given an opportunity to share their flow mapping process with other like centers.

Commonly used Symbols for Process Mapping:

Symbol	Description
	Activity/operation/process
\Diamond	Decision/Question or Branch
	Wait or Delay
	Database
	Data
O :	Unknown
	Permanent Storage
	Terminator
	Document
0	Connector
	Flow Line

Section II: Flow Mapping Process Worksheet

Use this worksheet to help gather the required data.

Flow mapping can show how processes actually happen at the ground level. This helps to illuminate the roles of those involved, and it enables those participating to see each other's' perspectives. It can also help with diagnosis of problems within the process, and can aid in the identification of areas for improvement. The goal of flow mapping in surge capacity planning is to identify system processes and improve efficiencies within the system. Identify the process strengths and barriers at each of the stages defined below:

Hospital Name	
Site Name	
Unit(s)	

Term	Definition
Inputs	The processes associated with the entry points for patients into the critical care unit.
	Which areas of the hospital do the patients come from? I.e. ER, OR, PACU, Wards
	What is the admission process to the critical care unit?
Throughputs	The processes involved in providing care for the critical care patients. i.e. staffing, rounds, care pathways etc.
Outputs	The processes associated with discharge process from the critical care unit. Where are your patients discharged to? Who is involved in the discharge process?

Inputs:

Strengths	Barriers

Τ	h	ro	ug	h	p	ut	ts	:

Strengths	Barriers

Outputs:

Strengths	Barriers

Appendix D: Patient Flow Monitor Worksheet (Form D)

This form will enable a snapshot view of the patient flow activities in each of the critical care units in your organization. The goal of this data collection process is to improve efficiency while maintaining patient safety.

Daily patient Flow Monitor Form				
To be completed by Team Leader/Charge Nurse daily for each participating Critical Care Area at 21:00 to reflect the prior to 24 hours				
Today's Date: Critical Care Unit:				
For the last 24 hours:				
Identify the number of scheduled RNs to provide direct patient care for the last 24 hours in the Critical Care unit	1			
Identify number of actual RNs available for the last 24 hours in the Critical Care unit (i.e. standard due to illness)	aff			
Identify the number of patients needing 1:1 care				
Identify the number of OR Cases that were cancelled due to lack of Critical Care capacity.				
Of the total number admissions from the PACU or OR how many were delayed for ≥ 4 hours				
Total number of ER patients admitted to the ICU				
Of the total number admissions from the ER how many were delayed for ≥ 4 hours				
How many admissions were from the WARD? Note: for organizations who have a CCRT this information will be identified from your CCIS indicators.				
If there was a delay (greater than four hours) in admission to the Critical Care Unit, identify the reason for delay i.e. capacity, staffing processes (waiting for other patients to be discharged from the unit, housekeeping, porter system, other):				

^{***} Form adapted from VHA'S 2002 Research Series – A practical Guide to measuring performance on the intensive care unit

^{*} For questions that are not applicable to your organization place (N/A) for your answer.

Appendix E: Planning for Human Resources (see Appendix K for checklist)

Document minimum number and categories of personnel needed to care for a single patient or small
group of patients on a given day for each specific department (normal staffing capacity)
Complete Staffing Inventory and document each staff member's skill set
Document existing standard critical care skill set*

* Example: Existing standard critical care RN skill set includes basic & advanced nursing skills:

- Advanced airway management (Suctioning, ventilator parameters, ETT management, ABG interpretation etc.)
- Arrhythmia & pacing interpretation/monitoring
- Hemodynamic monitoring
- IV drug administration including the titration of vasoactive drugs
- Arterial, central venous & PA line management
- Comprehensive head-to-toe patient assessment
- ICP drain management
- Emergency arrest response
- Must include a complement of staff with additional advanced training such as CRRT & IABP
- □ Identified other sources of available staff with existing standard critical care skill set* (e.g. former critical care staff, agency, other hospital critical care unit staff etc.)
- ☐ Establish an enhanced skill** set in acute care staff
- ** **Example:** Enhanced critical care RN skill set (staff with trained emergency response (EMAT pool), operating room, Level 1 and 2 intensive care units, telemetry experience, and previous critical care unit staff) includes basic & few advanced nursing skills:
 - Arrhythmia interpretation
 - Arterial & central venous line management
 - Basic airway maintenance (Non-ventilated)
 - IV drug administration
 - Basic vital signs assessment (HR, BP, Temp, RR, O₂ Sat),
 - IV insertion & phlebotomy

Document key strategies and educational partners to implement enhanced skill set**
Establish an alternative staffing model*** to increase staff complement during minor surge events

*** **Example:** Alternate staffing models are tiered systems where critical care staff expertise is used to oversee staff with non-critical care skill sets & provide advanced care needs to multiple patients

- Critical care RN oversees 2 telemetry floor staff & each with two critical care patients
- 1 intensivist oversees up to 4 non-intensivists

The above listed examples of skill sets are <u>recommendations</u> only. Each organization will be required to define a critical care skill set that is specific to their organization and dependent on the level of care that is required. Furthermore, each organization will be required to analyze the acute care staff and their skills and decide what enhanced skill set can be built from existing skill sets to enhance the organization cache of human resources.

Appendix F: Managing Equipment and Facilities for Alternative Space (see Appendix K for checklist)

	Conduct a 'walk-about' in all patient areas in the organization to assess each area for the following elements:			
	Alternative physical space availability Equipment and technology supplies availability Determine the normal capacity for each area Determine the resource requirements to sustain a surge event that escalates up to 15% above normal capacity			
Es	sential Transport Supplies:			
Tra	ansport supplies should be available for transports between units and decantation outside of hospital.			
Es	sential Patient Area Environmental Needs:			
	Ability to directly or indirectly view patient Patient call system Adequate lighting Adequate space to accommodate equipment and personnel to meet patient needs Cardiac arrest equipment Emergency alarm system Bed/stretcher bed, over bed table, chair			
Es	sential Utilities Required:			
	Electrical power – adequate outlets for needs Oxygen- 2 outlets per bed Compressed air- one outlet per bed Vacuum system- 3 outlets per bed Water supply- hand washing sinks, toilet Lighting- adequate for patient care, emergencies and charting			
Es	sential Patient Care Equipment/Supplies:			
	Rapid retrieval of crash cart and portable monitor/defibrillator X-Ray viewing system, station or computer Physiologic monitoring with recording capability (ECG, 3 pressure lines, O2 sat monitor) Thermometers, glucometers, urine qualification devices			

	Access to laboratory specimen transport –pneumatic tube, system, porter, Point-of-Care systems etc.
	Lange Lange Control of the Control o
_	Non-invasive blood pressure cuffs
Ш	Required respiratory equipment – ventilators, O2 delivery equipment, intubation trays, suction equipment
Es	sential Work Area/Storage Needs:
	Portable cart for supplies
	Supplies for patient care
	Linens
	Medications, refrigerator for pharmaceuticals, double locking safe for controlled substances
	Medication preparation area
	A sink with hot and cold running water
	Telephone and/or other intercommunication system
	Computer access
	Space and seating for medical record charting by both nurse and physician
	Access to dirty utility room/hopper
	Bio-medical support available

Appendix G: Building a Decantation Process and Community Partnerships

Recommendations for Building a Decantation Process

	Identify and document processes for triaging patients. Identify who qualifies for early discharge during an anticipated minor surge event
	Approve the decantation process by patient care and medical advisory committees
	Implement a triage colour-coding on all electronic patient charts and in collaboration with information technology department
	Establish a system in which the planned expected date of discharge (EDD) is documented on all patients charts
	Daily distribution to all Clinical Managers of patient list indicating who will be discharged that day (based on EDD)
	Review current discharge practices
	Review current transfer practices and inter-unit coordination with a focus on critical care
	Establish mock exercises to examine barriers in discharging patients
	Establish a discharge "team " of nurses, bed manager, social workers, and senior clinical decision makers to facilitate discharges during surge events
	Facilitate a method to ensure contact numbers for family members/significant others are documented
Reco	mmendations for Building Community Partnerships
	Establish a process to contact Community Care Access Center (CCAC) staff to expedite community care for discharged patients
	Establish agreements with CCAC to provide service within 24-hours of discharge during surge

ш	Distribute a call back list for CCAC off-hour service
	Establish processes and algorithms for inter-facility air and land transport in surge events within the OH Region
	Contact external resources to establish collaborative relationships within the region Municipalities Emergency management agencies Regional hospitals and long-term care facilities Public health agencies
	Establish agreements with local EMS (Emergency Medical Services) and private inter-facility providers to facilitate transport of patients requiring paramedic care and non- ambulatory patients that are otherwise stable to other health care facilities or home during surge events
	Establish a memoranda of understanding with EMS, inter-facility providers and taxicab companies (can be part of existing contract) for rapid response (1-2 hour) during surge events
	Review and/or establish agreements with local long term care homes, complex continuing care centers and rehabilitation facilities to waive standard admission criteria at predefined surge threshold, in order to expedite placement of designated ALC patients
	Review and establish policies and procedures for rapid placement of patients (same day) during surge events

Appendix H: Critical Care Surge Capacity Management Plan Transformation Map

CRITICAL CARE SURGE CAPACITY MANAGEMENT TRANSFORMATION MAP (LEVEL 3 & 2 UNITS)			
Activities	Completed By:	Completed (mm/dd/yyyy)	
OBJECTIVE 1: Establish Corporate Sponsor and Steering Committee			
a. Identify a Corporate Sponsor as the designated champion for this initiative			
b. Ensure the Corporate Sponsor is aware of the Critical Care Strategy and surge capacity management principles to ensure consistency in communication			
c. Identify a champion from all of the following departments to participate on the Corporate Steering Committee: • Medicine • Nursing Administration • Emergency Department • Peri-operative Services • Infection Control • Material Management • Local Bargaining Unit • Front line staff Champions- Critical Care Note: If a similar committee exists, this committee could be utilized as the forum for communicating the plan d. Each Member of the steering committee to begin to provide an in-service on the surge management principles in their departments			
OBJECTIVE 2: Establish a Critical Care Surge Resource Team			
a. Identify a physician who will be the Gatekeeper for critical care capacity			
 The Physician Gatekeeper will co-chair the steering committee with the Corporate Sponsor. The Physician Gatekeeper is accountable for managing critical care capacity for surge events 			

	CRITICAL CARE SURGE CAPACITY MANAGEMENT TRANSFORMATION MAP (LEVEL 3 & 2 UNITS)			
	Activities	Completed By:	Completed (mm/dd/yyyy)	
b.	Assemble a Critical Care Surge Resource Team			
	Submit a contact list for the resource team			
	Proposed Framework:			
	 Physician Champion/Gatekeeper/Medical Lead: Nurse Manager: Nurse Educator: 			
	 Nurse Educator. Four frontline staff (mix to include 2 senior RN, 1 junior RN, and 1 RRT) 			
C.	Hold a meeting with your Critical Care Surge Resource Team			
	 When the team is formed, identify the roles and responsibilities and who will perform each task on the assigned transformation map. Designate one member as the Site Lead Agree on a regular meeting time for your Critical Care Surge Resource Team 			
d.	Prepare a checklist for the Medical Director/designate of critical care unit to facilitate in a time of surge (see Appendix K for example)			
OB	JECTIVE 3: Complete Comprehensive Hospital Assessments			
	a.The Critical Care Surge Resource Team to complete the hospital, capacity, and services assessment worksheets (Forms A, B, and C ; Appendix B)			
	 When the comprehensive hospital assessments are completed, it is very important to identify any barriers or implications that would affect change management 			
a.	 The Critical Care Surge Resource Team to complete a flow mapping exercise (a guide and worksheet can be found in Appendix C) Encourage input from all members of the critical care team Complete a process mapping worksheet 			

CRITICAL CARE SURGE CAPACITY MANAGEMENT TRANSFORMATION MAP (LEVEL 3 & 2 UNITS)			
Activities	Completed By:	Completed (mm/dd/yyyy)	
b. Collect data for Form C: Patient Flow Monitor on a daily basis, for a period of three months (Refer to Form C, Appendix D for the patient flow monitor worksheet)			
OBJECTIVE 4: Establish a System that is Knowledgeable About Surge Capacity Management			
 a. Create/design a communications campaign that educates all frontline staff, administrative, and medical staff on: The surge capacity management principles, information on the OH Demonstration Project, and the benefit to patients, families, staff, organizations and OH Regions Consider using existing publications, newsletters, emails, lunch and learn and existing meetings; see communications starter kit on toolkit website 			
 b. Conduct information sessions for the following groups: a. Medical Advisory Committee (MAC) b. Senior team c. Frontline staff d. Other departments i.e. surgical services and emergency room 			
OBJECTIVE 5: Establish a Critical Care Communication System			
 a. Utilize a white board and communication protocols to: a. Triage patients daily utilizing a colour code to identify acuity b. Identify the date the patient was placed for discharge to the ward Note: Consider patient confidentiality 			
 Red- Patient remains in ICU Yellow- Possibility of transfer under 36 hours Green- Patient can be transferred 			
 b. Implement a communication tool to be utilized on admission and discharge in normal capacity and in crisis and surge events Consider Situational Briefing Model-SBAR (see Appendix J on Situational Briefing Model) 			
c. Identify communication plans to notify all levels of organization during surge events (such as management/senior team, medical staff, frontline staff, patients and families, general public, etc.)			
 d. Develop algorithms for critical care staff to utilize in surge events Identify how the surge plan is activated, prepare a checklist to utilize in minor surge events (see Appendix K for an example) 			
OBJECTIVE 6: Identify Essential Services and Functions Required to Sustain the Critical Care Service			

CRITICAL CARE SURGE CAPACITY MANAGEMENT TRANSFORMATION MAP (LEVEL 3 & 2 UNITS)			
	Activities	Completed By:	Completed (mm/dd/yyyy)
Not	te: Review flow mapping process result prior to beginning this section		
a. b.	Review flow mapping process Identify how patients gain access to critical care Develop an algorithm for the critical care staff on the admission process Identify the discharge process for critical care patients Identify who determines patients are ready for transfer		
	 Document the transfer process inclusive of inter-unit transfer and discharge from the organization For trending review the data collection to identify delays in discharge Differentiate the transfer process for minor surge events Coordinate early discharge planning for expediting the discharge of patients in minor surge events. Note: partner with Community Care Access Centres and social work to facilitate the process Develop criteria for shifting patients to alternative space to accommodate for surge events 		
C.	Develop Criteria for shifting patients to alternative space to accommodate for surge events		
	OBJECTIVE 7: Establish System Preparedness for Human Resource Capacity (See Appendix E for Information on Planning for Human Resources for Surge Events)		
a.	Complete Minor Surge Event Worksheet Complete the Minor Surge Event Worksheet (See Appendix I) as needed		
b.	Identify who is accountable for staffing during a minor surge		
C.	Define 'normal staffing capacity'		
d.	on a given day for each specific department		
e.	Define the necessary critical care skill set		
f.	Complete Staffing Inventory		

	CRITICAL CARE SURGE CAPACITY MANAGEMENT TRANSFORMATION MAP (LEVEL 3 & 2 UNITS)			
	Activities	Completed By:	Completed (mm/dd/yyyy)	
g.	Document each staff member's skill set in ICU, CCU, PACU, and ER			
h.	Identify an enhanced skill set that can be utilized in minor surge events			
i.	Collaborate with local collective bargaining unit in defining the terms of the enhanced skill set			
j.	Identify key strategies in implementing educational process to establish an enhanced skill set			
k.	Establish an alternative staffing model to increase staff complement during minor surge			
I.	Introduce cross training of personnel to provide for essential patient care areas at times of severe staffing shortages (e.g. ER, ICU or medical units)			
m.	Define the role of multidisciplinary team members in a minor surge event			
n.	Prepare a checklist to assist with the management of human resource compliment in a surge event (see Appendix K for a sample checklist)			
OB.	IECTIVE 8: Establish System Preparedness for Alternative Physical Space for Surge Events			
(Se	ee Appendix F for examples on managing equipment for alternative space)			
a.	Include key stakeholders in the planning of alternate space areas including infection control, plant operations/facilities planning etc.			
b.	Identify areas for alternative physical space to be utilized in minor surge events			
C.	If pre-determined areas exist assess the current functionality of the designated area, particularly as it relates to patient care, work area/storage, equipment, supplies and utilities			
d.	Identify the shared governance between critical care unit and this alternative space			

Activities Completed By: Completed Recompleted Recomp		CRITICAL CARE SURGE CAPACITY MANAGEMENT TRANSFORMATION MAP (LEVEL 3 & 2 UNITS)			
f. Prepare an algorithm of the transfer process of patients to this area g. Implement an education plan for frontline staff on alternative physical space h. Prepare a checklist to ensure the functionality of the alternative physical space in a time of surge (See Appendix F for example; see Appendix K for sample checklist) OBJECTIVE 9: Establish System Preparedness for Equipment and Resources for Surge Events (See Appendix F for examples on how to manage equipment for alternative space) a. Establish an inventoried cache of equipment b. Set-up a portable supply cart that can moved to surge area c. Identify how equipment is monitored for functionality d. Identify the location and accessibility of equipment for surge events e. Prepare an organization resource checklist to be utilized to access equipment in minor surge events (See Appendix K for sample checklist) f. Collaborate with the region to understand what regional equipment resources exist in other centers and how they can be accessed in surge events (optional)		Activities	Completed By:		
g. Implement an education plan for frontline staff on alternative physical space h. Prepare a checklist to ensure the functionality of the alternative physical space in a time of surge (See Appendix F for example; see Appendix K for sample checklist) OBJECTIVE 9: Establish System Preparedness for Equipment and Resources for Surge Events (See Appendix F for examples on how to manage equipment for alternative space) a. Establish an inventoried cache of equipment b. Set-up a portable supply cart that can moved to surge area c. Identify how equipment is monitored for functionality d. Identify the location and accessibility of equipment for surge events e. Prepare an organization resource checklist to be utilized to access equipment in minor surge events (See Appendix K for sample checklist) f. Collaborate with the region to understand what regional equipment resources exist in other centers and how they can be accessed in surge events (optional)	e.	Establish where the equipment resource will come from			
h. Prepare a checklist to ensure the functionality of the alternative physical space in a time of surge (See Appendix F for example; see Appendix K for sample checklist) OBJECTIVE 9: Establish System Preparedness for Equipment and Resources for Surge Events (See Appendix F for examples on how to manage equipment for alternative space) a. Establish an inventoried cache of equipment b. Set-up a portable supply cart that can moved to surge area c. Identify how equipment is monitored for functionality d. Identify the location and accessibility of equipment for surge events e. ORIECTIVE 10: Establish System Prenaredness by Defining a Decantation Process for Surge Events	f.				
	OB	IECTIVE 10: Establish System Proparedness by Defining a Decaptation Process for Surge Events			

	CRITICAL CARE SURGE CAPACITY MANAGEMENT TRANSFORMATION MAP (LEVEL 3 & 2 UNITS)		
	Activities	Completed By:	Completed (mm/dd/yyyy)
(Se	e Appendix G for recommendations on building a decantation process)		
a.	Establish a system in which planned expected date of discharge (EDD) is documented on all patients charts		
b.	Establish daily distribution to all Clinical Managers of patient lists indicating who may be discharged that day (based on EDD)		
C.	Establish a discharge process to be utilized during minor surge events in critical care and acute care areas		
d.	Prepare an organization checklist for decantation process in minor surge		
e.	Identify how community and transport services will be utilized during the decantation process		
ОВ	JECTIVE 11: Build Partnerships to Determine how Patient Volumes from other Clinical Areas Impact Critical Care		
a.	Designate a champion from the operating room (OR) team to the Corporate Steering Committee (OR Manager/Director suggested)		
b.	Partner with your operating room services delegate to determine required surgical access to critical care beds based on service and surgical procedure Identify and document routine method of booking critical care beds Review surgical cases requiring critical care service post-operation Develop a standardized booking process that will enable planning for critical care capacity Establish necessary timelines for booking of critical care beds		
C.	Determine a daily capacity for post-operative cases requiring critical care beds consider staffing, holidays, and resource availability (for example 3 OR cases maximum daily)		
d.	Determine a process in which surgical cases are cancelled in minor surge events		
e.	Determine who cancels surgical cases in a minor surge event		
f.	Establish a collaborative process between critical care and operating room to evaluate the required daily critical care capacity		
g.	Designate a champion of the ER team to the Corporate Steering Committee (ER Manager/Director suggested)		

CRITICAL CARE SURGE CAPACITY MANAGEMENT TRANSFORMATION MAP (LEVEL 3 & 2 UNITS)		
Activities	Completed By:	Completed (mm/dd/yyyy)
h. Partner with the ER delegate to identify barriers in accessing critical care services		
OBJECTIVE 12: Evaluation		
a. Upon completion of the Surge Capacity Management Framework, each organization will:		
 Conduct rehearsals to test the efficiency of the plan Identify areas for improvement Have a yearly update to review and renew the policy procedures 		

Appendix I: Minor Surge Event Worksheet

Name and Title:	
Surge Event	
Surge Event Start date:	Approximate time:
Surge Event End date:	Approximate time:
In the space provided below, please de	escribe the surge event
(Including the length of the event, causi designated leadership groups)	se, and who was notified of the events occurrence from
Patient Populations	
In the space provided below, please do surge event	escribe the patient populations that brought about the

Surge Interventions
Please indicate the interventions completed to accommodate capacity for up to 15% above normal capacity (>100% and <115%)
Describe use of alternative space to accommodate for the surge event
(This includes bed spacing patients to other areas from critical care (i.e. CCU, step-down))
Describe use of human resource compliment to accommodate for the surge event
Describe use of equipment cache to accommodate for the surge event
Did the surge event require a delay or cancellation of surgeries? (Yes/No)
If yes, what type of surgeries?

Major Risks and Issues
Describe the barriers in accommodating for the surge event, and describe the impact of the event and any actions taken
Identify interventions that were implemented during the surge event but were not effective
Recommendations and requests for decisions and support
In the event that barriers exist, identify what would have been helpful in overcoming the barriers to accommodate for the surge event
RAG STATUS: RED/AMBER(/YELLOW)/GREEN
Red
Capacity requirement exceeds institutional capability

Both capacity and sustainability are at risk	
Amber/Yellow	
 Capacity required ≤ 15% normal capacity (115%) Patient volumes remain under 115% capacity Sustainability of critical care resource at risk Remedial actions in place 	
<u>Green</u>	
 Normal level of attention Normal capacity No actions required Sustainable critical care service with institutional tolerance 	

Appendix J: SBAR: A Situation Briefing Model

Communication failures are a common cause of errors, resulting in inadvertent patient harm. The complexity of medical care, coupled with the inherent limitations of human performance, make it critically important that clinicians have standardized communication tools, create an environment in which individuals can speak up and express concerns, and share common "critical language" to alert team members to unsafe situations.³ Effective communication and teamwork are essential for delivering high quality patient care and maintaining patient safety. A strong communication process and plan can eliminate uncertainty in daily functioning and during surge events.

SBAR

SBAR is a communication technique that helps members of the health care team organize and present critical information about a patient's condition in an efficient and effective way. The SBAR tool consists of a script template in which the patient's information is entered. The script is then used to guide the conversation between members of the health care team about a patient requiring a clinician's immediate attention and action.

SBAR is an acronym for:

- Situation
- Background
- Assessment
- Recommendation

Situation	What is happening with the patient at the present time? This should include identifying yourself, the patient, and a statement of your concerns.
Background	What is the key clinical background leading up to this situation? The background is brief and pertinent history of the patient and may include admission diagnosis, treatment to date, current mediations or lab results.
Assessment	What do I think the problem is? Identify the key factors from your assessment.

³M Leonard, S Graham, D Bonacum <u>The human factor: the critical importance of effective</u> teamwork and communication in providing safe care, Qual Saf Health Care 2004; 13(Suppl 1):i85–i90.

HCPro, Inc. (2006) SBAR: Situation, Background, Assessment, Recommendation A Communication Handbook for All Staff.

Recommendation	What actions do we take to correct the
	problem? The recommendation should include
	any tests that need to be done and any issue
	that needs to be addressed immediately.

Modify the SBAR tool template for your organization

The SBAR tool can be modified to include information that is specific to and necessary for quality patient care in a critical care setting.

Using the SBAR tool

The SBAR tool is used most often when a nurse is communicating to a physician.

- a. Prior to calling the physician, the nurse should:
 - Assess the patient
 - Know the admitting diagnosis and date of admission
- b. Have available:
 - Patient's chart
 - List of medications
 - Lab results
 - Code status
- c. Call the physician and follow the SBAR process
- d. Document the discussion in the patient's chart

Suggested Readings:

- Visit the Institute for Healthcare Improvement website at www.ihi.org and search for a sample SBAR tool

APPENDIX K:

Section I: Minor Surge Event Checklist Template

PROCESS CHECKLIST IN MINOR SURGE

Minor Surge Defined

An acute increase in demand for critical care services, up to 15% above normal capacity, that is localized to an individual hospital for which:

- o A local level response at the individual hospital is sufficient
- o Individual hospital boards are responsible for overseeing the surge responsibility
- o Human resources in the hospital are sufficient to meet demand
- o Supplies in critical care and acute care services will be sufficient to meet the demand
- o Resources in the hospital are sufficient to meet the demand
- o Physical space resources meet the needs of the event
- Use of alternative space is considered

Checklist will be used to address minor surge events

DATE & TIME	ASSIGNED	KEY ACTION ITEMS FOR MINOR SURGE EVENT	
INTIATED	DELEGATE	RET ACTION TIEWS FOR WINGOR SONGE EVENT	
DEFINING SURGE			
		☐ Do you meet the above criteria for defining minor surge? ☐ YES ☐ NO	
		Identify the cause of the surge event	
		Document the start/onset of the surge event	
		Prospectively define duration of the event	
ACTIVATE MINOR	SURGE PROCESSES	S	
		Appoint a lead to be accountable for the critical care unit during the surge event	
		Implement communication plan to alert organization of the escalation to minor surge	
		Activate Incident Command System per hospital policy	
		 If the event is related to an infectious disease process: Ensure notification of Infection Disease Department and activation of appropriate existing infectious disease plans Ensure appropriate notification of local public health Communicate findings to patients when confirmed by public health authorities 	
		Distribute checklists for critical care unit physician and critical care unit manager to follow during minor	
		surge process o ICU Medical Director/Delegate (Appendix K – Section III)	
DIRECT CAREGIVE	R PROTECTION	ICU Manager/Delegate (Appendix K- Section II)	
		Provide caregivers the highest necessary personal protective equipment and associated training	
		, , , , , , , , , , , , , , , , , , ,	

DATE & TIME	ASSIGNED		
INTIATED	DELEGATE	KEY ACTION ITEMS FOR MINOR SURGE EVENT	
		Provide support to meet mental health and personal needs of caregivers	
		☐ Initiate communication process to ensure the frontline staff have access to information and are updated frequently regarding surge event	
EVALUATE AND AS	SSESS THE CRITICAL O	ARE UNIT	
		Assess the existing patient population in the critical care unit	
		 Document expected admissions & discharges from the critical care unit: Identify which patients are the priority & who is ready for transfer, using traffic light acuity system 	
		☐ Communicate the transfer process including inter-unit and out of hospital coordination ○ Initiate transfers if required	
		Assess and address transfer delays in and out of the critical care area	
		Adhere to admission and discharge criteria for minor surge events	
		Reassess and verify all admission and discharge of patients	
		☐ Clearly identify and communicate surge admitting privileges in the critical care unit	
ASSESS HUMAN R	ESOURCE CAPACITY		
		Assess the staffing needs of the critical care unit Consider available staff Consider alternate staffing/shift lengths	
		Access inventory of human resource capacity	
		Assess & access staff available from other intensive care areas (if applicable)	
		Assess & access staff available with floating skill set (ED, step-down units, PACU, cath labs, OR etc.)	
		☐ Consider alternative staffing	

DATE & TIME	ASSIGNED	
INTIATED	DELEGATE	KEY ACTION ITEMS FOR MINOR SURGE EVENT
PATIENTS AS THE		
		☐ Maintain the ability to provide safe and routine care to patient populations
		☐ Establish effective modes of direct communication for staff, patients and families
SUPPLIES		
		Distribute Supply and Equipment Checklist to delegate to ensure supply meets demand
		Assess medications and supplies required per designated unit starting with critical care for sustainability of event
		If the surge event continues activate stockpiling of necessary medications and supplies
		Activate designated team to ensure supplies reach the appropriate units
		Activate designated housekeeping team to ensure beds turnover is less than 30 minutes
		As appropriate assign a pharmacy delegate to ensure medication supply meets the required demand
		☐ Track distribution of inventory and location of supplies
		In prolonged events, activate agreements with external providers for continuous supply of essential goods and services – i.e. food, medications, oxygen, biomedical services, lab and diagnostics as required
IDENTIFY ALTERNA	ATIVE PHYSICAL SPA	CE FOR CRITICAL CARE PATIENTS
		Assess availability of pre-established areas within hospital for critical care overflow
		Activate necessary processes to utilize alternative space(s): Appropriate staffing, equipment and supplies Transport needs
		Refer to Alternative Physical Space Functionality Checklist (Appendix K – Section IV)
		Identify one staff member to be conduit for two-way communication between the designated area and the critical care area

DATE & TIME	ASSIGNED	KEY ACTION ITEMS FOR MINOR SURGE EVENT
INTIATED EVALUATE THE SYS	DELEGATE STEM	
		□ Determine if other health services are experiencing similar surge events
		□ Initiate common template for communication with external sources (external to critical care & organization) related to: ○ Admissions and discharges ○ Patient Identifying information & demographics ○ Underlying disease & symptom presentation □ Identify staff member who will be the lead for communication during the surge event □ Increase security measures as required □ Initiate hospital-wide patient assessment and triage
ASSESS AND EVAL	UATE DEPARTMENT	BED UTILIZATION – ALL REMAINING UNITS
		☐ Identification of Senior Administrative Lead
		☐ Communicate with critical care unit Surge Capacity Lead
		Review triaging of all in-hospital patients Colour code patients charts to identify priority patients for transfer Electronic coding through IT department

DATE & TIME	ASSIGNED	KEY ACTION ITEMS FOR MINOR SURGE EVENT
INTIATED	DELEGATE	RET ACTION TIEMS FOR MINIOR SORGE EVERT
		Implement bed utilization review system Example: Bed management meeting for a global bed utilization review to establish/implement the following as appropriate:
		 Placement of over census and off service patients Access repatriation agreements with sending hospitals Closed rooms that can be converted to a patient room Convert private to a semi-private for overflow Review methods to expedite discharges: Review discharge plan for every patient Identify processes that are delaying transfers Facilitate early discharges (discharge lounge(s); Social Work involvement for early discharge planning on all ALC patients etc.) Early distribution of morning lists of patients who may be discharged that day (based-on EDD) 'Discharge Team' of nurses, Bed Manager and Senior Clinical Decision-Makers to be mobilized
		☐ Implement Decantation to Community Procedures
		 Review Community Care Access Centre (CCAC) and Long-Term Care Home (LTCH) applications on patients charts Contact CCAC staff to expedite community care for discharged patients As per pre-agreements with CCAC to provide service within 24 hours of discharge during surge initiate call back list for CCAC after hours service Review agreements with local LTCH's, Complex Continuing Care Centers and rehabilitation facilities to waive standard admission criteria at predefined surge threshold, to expedite Alternate Level of Care placement Begin rapid placement of patients (same day) during surge Initiate transport of triaged patient to other centers as per established guidelines with local EMS and private medical transport provider If transport of patients requires longer than 1-2 hour during a surge event review documented memoranda and contact the transporting authority Assign a delegate to contact family members of patients that are being transferred

DATE & TIME	ASSIGNED	KEY ACTION ITEMS FOR MINOR SURGE EVENT
INTIATED	DELEGATE	
CONSIDER ELECTIV	/E SURGICAL DELAY	
		Reassess critical care unit capacity
		☐ In collaboration with Chief of Surgery, determine the priority of surgical cases
		Notify all surgical teams of the delay
		Establish a priority system to identify by patient who requires access to the available critical care beds
		☐ Identify the timeline for surgical cases to process
		Identify if all cases are on hold until further notice

Section II: Checklist Template for ICU Manager

PROCESS CHECKLIST IN MINOR SURGE FOR ICU MANAGER

Minor Surge Defined

- o A local level response at the individual hospital is sufficient
- o Individual hospital boards are responsible for overseeing the surge responsibility
- o Human resources in the hospital are sufficient to meet demand
- o Supplies in critical care and acute care services will be sufficient to meet the demand
- o Resources in the hospital are sufficient to meet the demand
- o Physical space resources meet the needs of the event
- Use of alternative space is considered

DATE & TIME INTIATED	ASSIGNED DELEGATE	KEY ACTION ITEMS FOR ICU MANAGER
DEFINING SURGE		
		 □ Do you meet the above criteria for defining minor surge? □ YES □ NO □ Identify the cause of the surge event
		Document the start/onset of the surge event
		Prospectively define duration of the event

DATE & TIME	ASSIGNED	
INITIATED	DELECATE	KEY ACTION ITEMS FOR ICU MANAGER
ACTIVATE MINOR	DELEGATE SURGE PROCESSES	
ACTIVATE WINOR	JONGL PROCESSES	
		Notify Nursing Administration of surge event in Critical Care
		In collaboration with Medical Director/Intensivist communicate the surge status to all staff in Critical Care areas
		Delegate assigned duties to all staff members
		Designate a staff member to communicate updates to staff
		Notify Admitting/Registration department of existing surge even. Inform Admitting department Critical Care patients are being triaged for potential transfer
EVALUATE AND AS	SSESS THE CRITICAL C	CARE UNIT
		In conjunction with Medical Director/Intensivist review all patients in ICU to determine if any patients can be transferred
		Assign a delegate in conjunction with Medical Director to triage all Critical Care patients
		Identify to Admitting/Registration all patients that have a transfer order written and are priority for in-house bed placement
		Review Human Resource capacity needs
		Delegate completion of Human Resource Capacity Checklist
		☐ Initiate Call-In of staff for surge event
		☐ Consider alternative staffing
		Review requirement for Alternative Physical Space for ICU patients with Medical Director
		Designate a staff member to being the Alternative Space Area checklist to assess the functionality of the area
		 Consult with Intensivist or ICU Physician-in-Charge Notify OR Manager of delay of internal cases Coordinate with ER Manager to prioritize influx of patients

Section III: Checklist Template for ICU Medical Director/Designate

PROCESS CHECKLIST IN MINOR SURGE FOR ICU DIRECTOR/DESIGNATE

Minor Surge Defined

- o A local level response at the individual hospital is sufficient
- o Individual hospital boards are responsible for overseeing the surge responsibility
- o Human resources in the hospital are sufficient to meet demand
- o Supplies in critical care and acute care services will be sufficient to meet the demand
- o Resources in the hospital are sufficient to meet the demand
- o Physical space resources meet the needs of the event
- o Use of alternative space is considered

DATE & TIME	ASSIGNED DELEGATE	KEY ACTION ITEMS FOR ICU MEDICAL DIRECTOR/DESIGNATE
DEFINING SURGE		
		 □ Do you meet the above criteria for defining minor surge? □ YES □ NO □ Identify the cause of the surge event
		Document the start/onset of the surge event
		Dragnactively define duration of the event
		Prospectively define duration of the event

ACTIVATE MINOR	SURGE PROCESSES	
		Implement communication plan to alert organization of the escalation to minor surge
		Activate Incident Command System as per Hospital Policy
		If the event is related to an infectious disease process: o Ensure notification of Infection Disease Department and activation of appropriate existing Infectious Disease Plans o Ensure appropriate notification of Local Public Health o Communicate findings to patients when confirmed by Public Health authorities
		Distribute Checklists for Surge Capacity Planning o ICU Medical Director/Delegate (Appendix K – Section III) o ICU Manager/Delegate (Appendix K – Section II) o Human Resource Capacity (Appendix K – Section V) o Equipment and Supplies (Appendix K – Section VI) o Alternative Physical Space (Appendix K – Section IV)
EVALUATE AND AS	SSESS THE CRITICAL CARE	
		Collaborate with Nurse Manager
		Document the existing patient population in the Critical Care unit
		Document expected admissions and discharges from the Critical Care unit: o Identify what patients are the priority and who is ready for transfer o Triage patients with a colour code: Red- Stays Yellow-Possible transfer Green-Go
		Assess all current ICU patients with ICU Manager/delegate and write transfer orders
		Assess the transfer process including inter-unit and out of hospital coordination
		Assess and address transfer delays in and out of the Critical Care area
		Consider alternative beds in the hospital
		Review pre-assigned alternative areas for Critical Care patients to be placed

	☐ Delegate a transfer team to facilitate the transfer process
	Adhere to admission and discharge criteria for minor surge events Review admission and discharge process with nursing staff
	Reassess and verify all admission and discharge of patients
	Clearly identify and communicate surge admitting privileges in the Critical Care unit
	□ Notify all Medical departments of minor surge status
	☐ Determine physician Human Resource capacity and initiate call in of staff
	Communicate with Chief of Surgery regarding the delay of internal elective cases
	Assess repatriation of patients in the Critical Care unit (if Possible)
	■ Notify Criti-Call of status of hospital and inability to receive external patients
	☐ Verify the checklists have been completed and assess status
	Reassess surge situation with frequent reporting to staff

Section IV: Alternative Physical Space Checklist Template

PROCESS CHECKLIST FOR ALTERNATIVE PHYSICAL SPACE

Minor Surge Defined

- o A local level response at the individual hospital is sufficient
- o Individual hospital boards are responsible for overseeing the surge responsibility
- o Human resources in the hospital are sufficient to meet demand
- o Supplies in critical care and acute care services will be sufficient to meet the demand
- o Resources in the hospital are sufficient to meet the demand
- o Physical space resources meet the needs of the event
- o Use of alternative space is considered

DATE & TIME INTIATED	ASSIGNED DELEGATE	KEY ACTION ITEMS FOR ALTERNATIVE PHYSICAL SPACE
DEFINING SURGE		
		□ Do you meet the above criteria for defining minor surge?□ YES□ NO□ Identify the cause of the surge event
		Document the start/onset of the surge event
		Prospectively define duration of the event

		KEY ACTION ITEMS FOR ALTERNATIVE PHYSICAL SPACE
INTIATED	DELEGATE	
ASSESS ALTERNATE		R MINOR SURGE EVENTS
		Assess areas of the hospital that ICU patients can overflow to including post anaesthesia care units, areas
		adjacent to ICU, ED
		Assess the functionality of this area as it relates to patient area, work area/storage, equipment and supplies and utilities
		If pre-determined areas exist assess the current functionality of the designated area
ASSESS PATIENT CAP	RE AREAS	
		Verify the following for the Patient Care Areas
		Ability to directly or indirectly view patient
		Patient call system
		Adequate lighting
		Adequate space to accommodate equipment and personnel to meet patient needs.
		Cardiac arrest equipment
		Emergency alarm system
		Bed/stretcher bed, over bed table, chair
ASSESS WORK AREA	-	
		Portable cart for supplies
		Supplies for patient care
		Linen
		Medications including refrigerator for pharmaceuticals, double locking safe for controlled substances
		Medication preparation area
		A sink with hot and cold running water
		Telephone and/or other intercommunication system
		Computer access
		Space and seating for medical record charting by both nurse and physician
		Access to dirty utility room/hopper
		Bio-Medical support available

DATE & TIME INTIATED	ASSIGNED DELEGATE	KEY ACTION ITEMS FOR ALTERNATIVE PHYSICAL SPACE
IN COORDINATION	N WITH BIO-MEDICAL	ENGINEERING ASSESS UTILITIES
		☐ Electrical power – adequate outlets for needs
		Oxygen- 2 outlets per bed
		☐ Compressed air- one outlet per bed
		☐ Vacuum system- 3 outlets per bed
		☐ Water supply- hand washing sinks, toilet
		Lighting- adequate for patient care, emergencies and charting
ASSESS ACCESSIBI	LITY TO NECESSARY E	QUIPMENT AND SUPPLY
		Rapid retrieval of crash cart and portable monitor defibrillator
		X-Ray viewing system- station or computer
		Physiologic monitoring with recording capability
		o ECG
		o 3 pressure line
		O2 sat monitor
		Thermometers
		Glucometer
		2 IV poles per bed
		IV pumps/IV administration equipment
		Non-invasive blood pressure cuffs
		Urine qualification devices
		Pulse oximeters
		Set-up a portable supply cart that can moved to surge area
		Required Respiratory equipment
		Review your up-to-date list of all current ICU equipment including old equipment in storage. This list should
		include number of ventilators including transport ventilators, BiPap machines, anaesthetic machines,
		transport monitors

Section V: Human Resource Capacity Checklist Template

PROCESS CHECKLIST FOR HUMAN RESOURCES CAPACITY

Minor Surge Defined

- o A local level response at the individual hospital is sufficient
- o Individual hospital boards are responsible for overseeing the surge responsibility
- o Human resources in the hospital are sufficient to meet demand
- Supplies in critical care and acute care services will be sufficient to meet the demand
- o Resources in the hospital are sufficient to meet the demand
- o Physical space resources meet the needs of the event
- Use of alternative space is considered

DATE & TIME INTIATED	ASSIGNED DELEGATE	KEY ACTION ITEMS FOR HUMAN RESOURCES CAPACITY
DEFINING SURGE		
		□ Do you meet the above criteria for defining minor surge?□ YES□ NO□ Identify the cause of the surge event
		Document the start/onset of the surge event
		Prospectively define duration of the event

DATE & TIME	ASSIGNED	
		KEY ACTION ITEMS FOR HUMAN RESOURCES CAPACITY
INTIATED	DELEGATE	
ASSESS HUMAN R	ESOURCE CAPACITY	
		Estimate & document minimum number and categories of personnel needed to care for the current patient
		population
		Assess the staffing needs
		o Consider available staff
		Consider alternate shift lengths
		By the approval of the Critical Care Manager call in available staff
		Obtain Staffing Inventory assess Human Resource capacity
		☐ Identify Staff with the pre-determined Critical Care Skill Set*
		*Example: Existing Standard Critical Care RN Skill Set includes basic & advanced nursing skills:
		 Advanced airway management (Suctioning, ventilator parameters, ETT management, ABG
		interpretation etc)
		Arrhythmia & Pacing interpretation/monitoringHemodynamic monitoring
		,
		IV drug administration including the titration of vasoactive drugs
		 Arterial, central venous & PA line management Comprehensive head to toe patient assessment
		ICP drain management Emergency arrest response
		Must include a complement of staff with additional advanced training such as CRRT & IABP
		Identify other sources of available staff with existing standard Critical Care Skill Set* (e.g. former Critical Care
		staff, agency, other hospital Critical Care unit staff etc.)
		Review the floating skill set** in Acute Care staff
		** Example: Floating Critical Care RN Skill Set (Staff with trained emergency response (EMAT pool), Operating
		Room, level 1&2 Intensive Care units, telemetry experience, and previous Critical Care unit staff) includes basic
		& few advanced nursing skills:
		Arrhythmia interpretation Artarial 8 control vanous line management
		Arterial & central venous line management Resis simply and a control of the control of
		Basic airway maintenance (Non-ventilated)
		 IV drug administration Basic vital signs assessment (HR, BP, Temp, RR, O2 Sat)
		■ IV insertion & Phlebotomy

DATE & TIME INTIATED	ASSIGNED DELEGATE	KEY ACTION ITEMS FOR HUMAN RESOURCES CAPACITY
		Review if Human Resource capacity exceeds the patient care needs
		 Review staffing needs with Medical Director and Nurse Manager
		Consider Alternative Staffing *** Example: Alternate staffing models are tiered systems where Critical Care staff expertise is used to oversee staff with non-Critical Care Skill Sets & provide advanced care needs to multiple patients Critical Care RN oversees 2 Telemetry floor staff & each with two Critical Care patients Intensivist oversees up to 4 non-Intensivists
REPORT BACK TO	MEDICAL DIRECTORY	/ OF CRITICAL CARE AND NURSE MANAGER
		Report findings to Critical Care team Supplies for patient care

DATE & TIME	ASSIGNED	KEY ACTION ITEMS FOR HUMAN RESOURCES CAPACITY
INTIATED	DELEGATE

DEFINING SURGE		
		 □ Do you meet the above criteria for defining minor surge? □ YES □ NO □ Identify the cause of the surge event
		Document the start/onset of the surge event
		Prospectively define duration of the event

DATE & TIME	ASSIGNED	
INTIATED	DELEGATE	KEY ACTION ITEMS FOR ASSESSING SUPPLIES AND EQUIPMENT
INTIATED	DLLLGAIL	
ASSESS CRITICAL C	ARE AREAS	
		Assess medications & supplies required in Critical Care for sustainability of event
		If the surge event continues activate stockpiling of necessary medications and supplies
		Ensure supplies reach the appropriate units
		As appropriate, assign a Pharmacy delegate to ensure medication supply meets demand
		Collaborate with Housekeeping Supervisor to activate designated housekeeping team to ensure bed turnover is less than 30 minutes
		☐ Ensure special order equipment will remain available for patient care
		☐ Evaluate the need for physical beds
		☐ Ensure the physical beds are available or accessible for the duration of the surge event
		Implement a process to track distribution of inventory and location of supplies
ASSESS PATIENT C	ARE AREAS	
		Verify the following for the Patient Care areas:
		Ability to directly or indirectly view patient Patient call system
		Adequate lighting
		Adequate space to accommodate equipment and personnel to meet patient needs
		☐ Cardiac arrest equipment
		☐ Emergency alarm system
		☐ Bed/stretcher bed, over bed table, chair

		transport monitors
DEDORT BACK TO	MEDICAL DIDECTORY	OF CRITICAL CARE AND MURSE MANAGER
REPURI BACK TO	INIEDICAL DIRECTORY	OF CRITICAL CARE AND NURSE MANAGER
		Report findings to Critical Care team Supplies for patient care

Appendix L: Process for Accessing Ventilators/HFNC Devices from the Stockpile

Appendix M: Glossary of Terms

Algorithm – A type of effective method in which a list of well-defined instructions for completing a task will, when given an initial state, proceed through a well-defined series of successive states, eventually terminating in an end-state.

Avoidable Days – Hospital inpatient days that could have been avoided.

Champion – A champion provides leadership and has authority to affect change.

Community Care Access Centre (CCAC) – Local organizations that can help patients access government-funded home care services and long-term care homes. CCACs help people to navigate the array of community support and health agencies in their communities.

Corporate Sponsor – A representative from your Senior Management Team, at a minimum at the VP level, which holds corporate accountability for the success of the program in your hospital. They should be able to: help the Hospital Resource Team address barriers to implementing the program, be well versed in the 5 capacity management principles, have visibility as a champion of the program, and play a pivotal role in supporting and facilitating change management. They will work closely with the Site Lead and the Physician Champion.

Corporate Steering Committee –The Steering Committee will consist of champions from various departments related to critical care. The surge management champions from across the organizational infrastructure are required to communicate with the frontline staff to ensure seamless coordination of services for critically ill patients.

Critical Care – Critical care medicine is a specialty that provides comprehensive and continuous care for adult and paediatric patients who are critically ill and who can benefit from treatment. This essential service can sustain and maintain life at critical moments of illness.

Critical Care Information System (CCIS) – As the information management system for the Critical Care Strategy, CCIS collects data in real-time, providing clinicians, administrators, regions and the MOH with secure and reliable information they can use to make better decisions about clinical practice and resource allocation.

Critical Care Response Teams (CCRTs) – CCRTs, also referred to as Medical Emergency Teams or Rapid Response Teams, are a major innovation in hospital practice gaining global recognition for their capacity to improve patient safety, critical care access, and the efficiency of hospital resource utilization. Comprised of intensive care physicians (intensivists), intensive care nurses and Respiratory Therapists, CCRTs bring the skills and expertise of a critical care unit beyond four walls to meet the needs of patients at risk wherever they are in the hospital.

Critical Care Skill Set –A determined collection of skills that the members of the critical care team must possess (i.e. critical care nursing skills).

Critical Care Strategy – Ontario's Critical Care Strategy is a seven-fold strategy to improve access, quality, system integration, and enhance the overall health system by addressing the policy, funding, and operational issues that contribute to wait times for critical care across the system. As a further evolution of this strategy, the Critical Care Secretariat (now CCSO) is supporting the implementation of a provincial program that will provide Ontario hospitals with a standardized practice for Surge Planning and Management.

Critical Care Surge Resource Team – Each organization will develop a central group that will be responsible for implementing the strategic elements of the plan to establish preparedness within their own organization. The teams will be referred to as the Critical Care Surge Resource Teams. Teams will vary in size and composition depending on the availability of staff and the composition of the critical care units. Each organization will build a team to suit its own needs.

Decantation Process –The preparation of additional physical space as required, often through a combination of early patient discharges, transfers, and through the collaboration and integration of services (such as with the OR, ER etc.).

Emergency Medical Assistance Team (EMAT) – EMAT is a mobile acute care field unit, fully equipped with its own medical equipment and supplies, a communications centre, electricity and water. It is staffed by an oncall support team of healthcare professionals including physicians, paramedics, nurses, respiratory therapists and x-ray technologists who have volunteered to work on EMAT during an emergency. EMAT is only meant to be used in the event of a major surge or disaster. If any community in Ontario finds that it does not have the capacity to respond effectively to a health emergency, it can request that EMAT be sent. **NOTE**: EMAT is deployed only after a community's own disaster plan has been activated and their systems are overwhelmed.

Flow Map – A process management tool that allows organizations to depict work/process flow. In addition, it is a chart with a linear process map that shows the amount of traffic or flow within your hospital.

Green – Through the use of the traffic light system, patients identified and rated at the green level can be safely transferred from critical care.

Level 2 Critical Care Unit –As defined by the CCIS Inventory, Level 2 units are capable of providing service to meet the needs of patients who require more detailed observation or intervention including support for a single failed organ system, short-term non-invasive ventilation, post-operative care, patients "stepping down" from higher levels of care or "step ups" from lower levels of care. These units provide a level of care that falls between the general ward (Level 1) and a "full service" critical care unit (Level 3). Level 2 units do not provide invasive ventilatory support. **Please Note**: critical care units that provide invasive mechanical ventilation for a short period (for example ≤ 48 hours) but need to transfer those patients who require more long-term invasive ventilation to a Level 3 unit are considered Level 2 for the purposes of the service inventory.

Level 3 Critical Care Unit – As defined by the CCIS Inventory, Level 3 units are capable of providing the highest level of service to meet the needs of patients who require advanced or prolonged respiratory support, or basic respiratory support together with the support of more than one organ system. This is generally considered a "full service" Critical Care unit despite the fact some specialized services may not be available (e.g. dialysis). All Level 3 units are capable of invasive ventilatory support. **Please Note**: For institutions that

combine Level 2 and Level 3 type critical care service in one geographic area (i.e. unit), the unit designations reflect the highest level of care provided – even if not all patients may be receiving that level of care.

Local Health Integration Network (LHIN) – In March 2006, the Ontario government passed legislation to create 14 LHINs across the province. The networks are not-for-profit corporations who work with local health providers and community members to determine the health service priorities of the regions. LHINs plan, integrate and fund local health services. *Note:* 14 LHINs were reorganized into 6 OH regions in 2021. This document has been updated to reflect the change to OH regions.

LHIN Demonstration Project –This was an initial pilot/demonstration project of surge management principles and techniques in the Champlain LHIN. The lessons learned and resources produced through this demonstration project were used to structure the current rollout of Surge Capacity Management Program across the remaining 13 LHINs.

Major Surge – An unusually high increase in demand that overwhelms the healthcare resources of individual hospital and regions for an extended period of time.

Ministry of Health and Long Term Care (MOHLTC) – In Ontario, the MOHLTC is responsible for establishing overall strategic direction and provincial priorities for the health system, developing legislation, regulations, standards, policies, and directives to support those strategic directions, monitoring and reporting on the performance of the health system and the health of Ontarians, planning for and establishing funding models and levels of funding for the health care system, ensuring that ministry and system strategic directions and expectations are fulfilled. The MOHLTC works in collaboration with the Local Health Integration Networks.

Minor Surge – An acute increase in demand for critical care services, up to 15% beyond the normal capacity that is localized to an individual hospital.

Moderate Surge – A larger increase in demand than a minor surge for critical services that impacts on a region.

Pandemic – is an epidemic of infectious disease that spreads through populations across a large region.

Red – Through the use of the traffic light system, patients identified and rated at the red level remain in ICU as they require life-sustaining interventions.

Severe Acute Respiratory Syndrome (SARS) – Is a respiratory disease in humans, which is caused by the SARS coronavirus. Ontario's battle with SARS revealed significant weaknesses in Ontario's healthcare system, including a limited ability to manage critical care resources across hospitals in response to a sudden spike in demand.

Site Lead – The person who will lead the Surge Resource Team to complete the transformation map. They will be the main contact for disseminating any pertinent information for the rest of the hospital and be the main representative that the Ministry will contact for updates on progress, monthly teleconferences etc. This does not need to be a physician as there is a role for a physician champion on the resource team.

Situational Briefing Model (SBAR) – A communication technique that helps members of the health care team organize and present critical information about a patient's condition in an efficient and effective way. The SBAR tool consists of a script template in which the patient's information is entered. The script is then used to guide the conversation between members of the health care team about a patient requiring another clinician's immediate attention and action.

Surge –Any situation where demand exceeds resources.

Surge Capacity –Is the ability to expand care in response to rapid or more prolonged demand in health care services.

Transformation Map – A map to help hospitals navigate their way through surge capacity management planning. The map will come together through the completion of transformational activities.

Triage - a process of prioritizing patients based on the severity of their condition. This facilitates the ability to treat as many patients as possible when resources are insufficient for all to be treated immediately.

Yellow/Amber – Through the use of the traffic light system, patients identified and rated at the amber/yellow level have a possibility of transfer within a 36 hours timeframe.
